

# Ongoing Challenges in the Creation of AR Experiences: Standards Update

Nicholas F. Polys, PhD

Virginia Tech

President, Web3D Consortium

*[Original Slides by Gerry Kim & Marius Preda]*

# Exciting Times!

- A lot of ‘Wild West’ innovation and compelling applications
- A growing concern for longevity and interoperability of MAR content: deliberate design for long term success
- Between 2011 and 2013, several SDOs took on the problem

# Mixed and Augmented Reality

# What is a Reference Model?

- A reference model (for a given domain) defines an authoritative basis that outlines:
  - Set of principles
  - Terms and their precise definitions
  - Generic system model of mixed/augmented reality system
    - Major components and their functionalities
    - Inter-component interfaces (data and control)
    - @ the right abstraction level w.r.t. purpose
  - Use cases
  - Others ...

## Purpose: A Model Architecture

- Help develop/extend consistent and comprehensive MAR standards
- Help MAR system designers and information architects and service developers
- Promote fluid communication among MAR practitioners in the field
- Identify and derive areas of standardization
- Validation and conformance

# Principles

- Provide many views:
  - Business/Marketing
  - Developer (Systems/Applications), System Architects
  - Standards Developer
- Provide a “Model”: Independence from *specific implementations*
  - Algorithms: E.g. Recognition/tracking, Rendering, ...
  - Sensors and real world capture
  - Platform / Distribution of computation
  - Scene description
  - Output Displays
  - ...
- Be able to describe a reasonable range of “ARC (or MAR)” applications/systems

# Hard Problem for 1 SDO!

# ISO MAR Reference Model

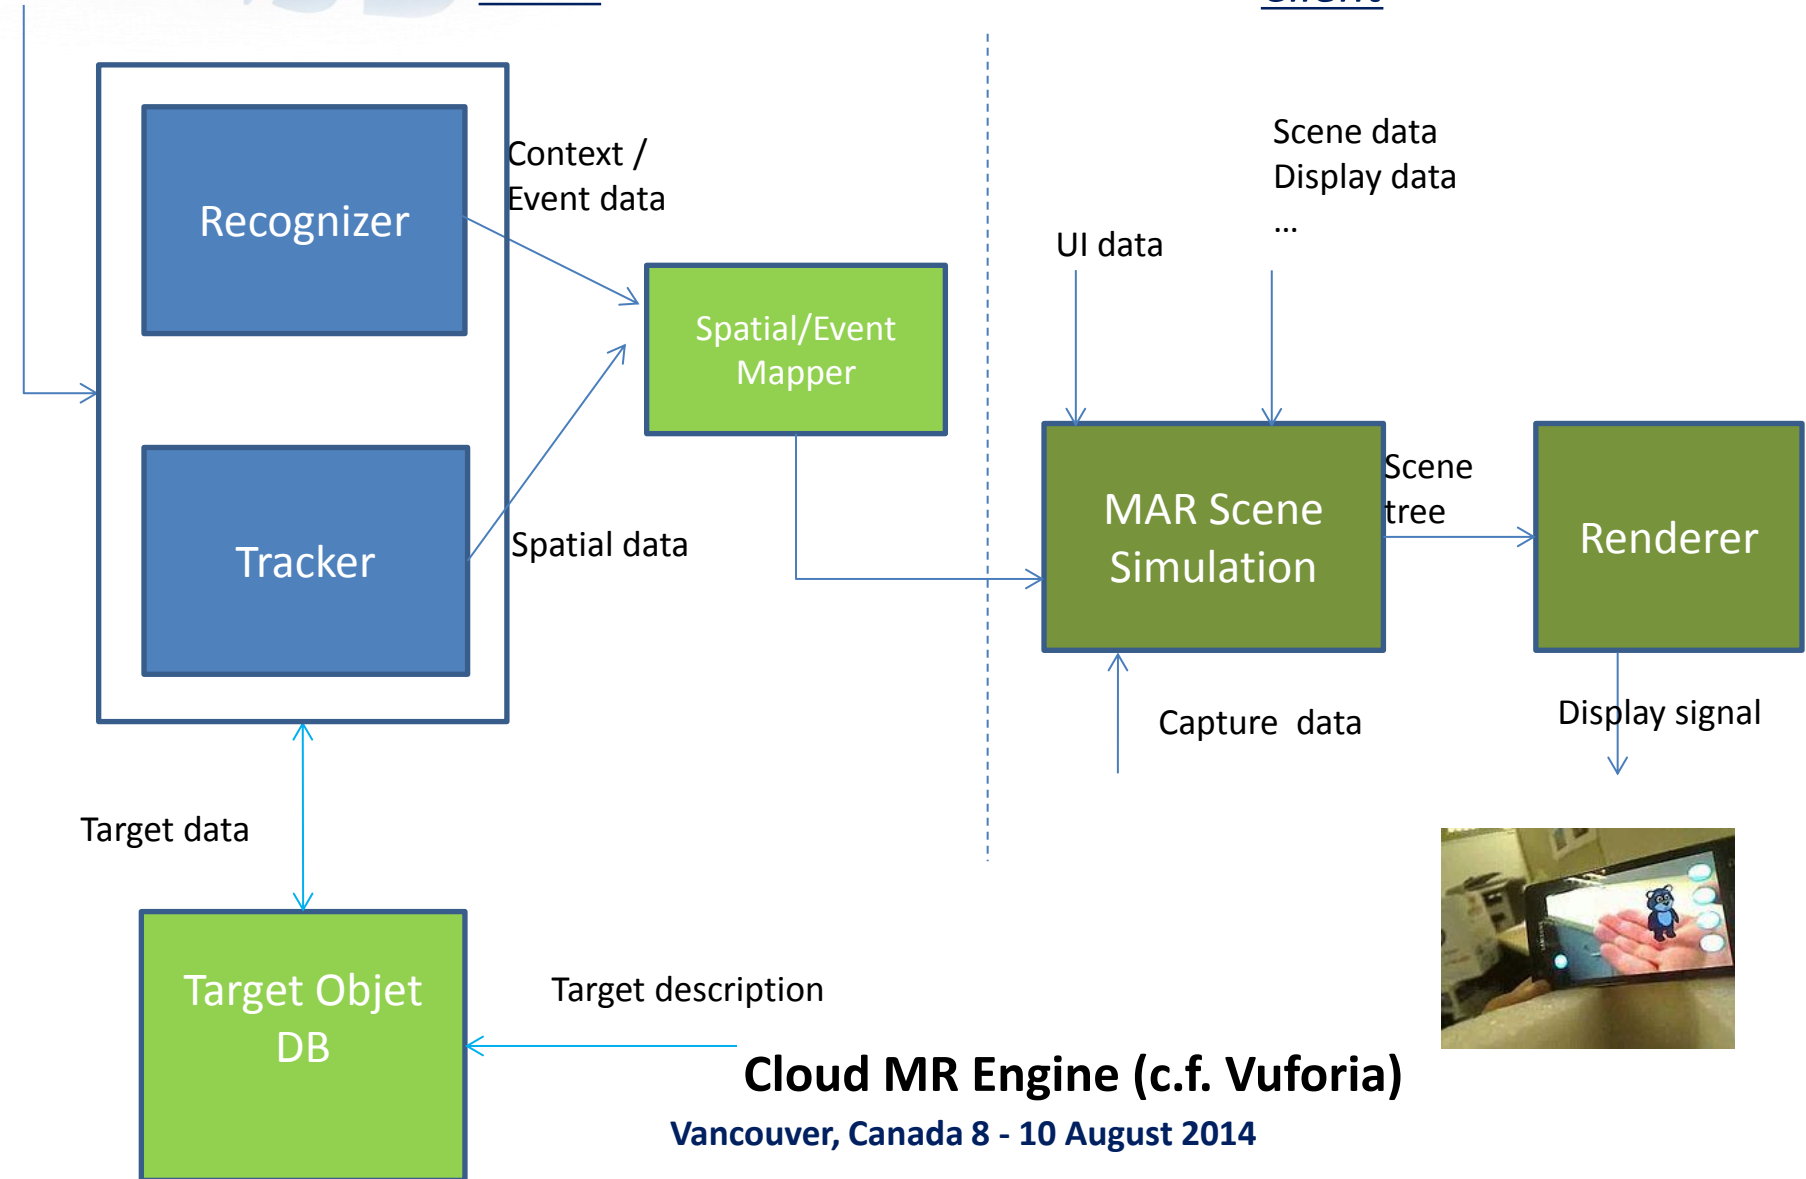

- **In development**
- **Uses a component-based classification system**
- **Covers terminology**
- **Demonstrates models with local and remote resources for processing and presentation**
  - 6 state-of-the-art use cases
  - 2 Point Of Interest (POI) use cases
  - Using 3D video
  - Using 3D audio

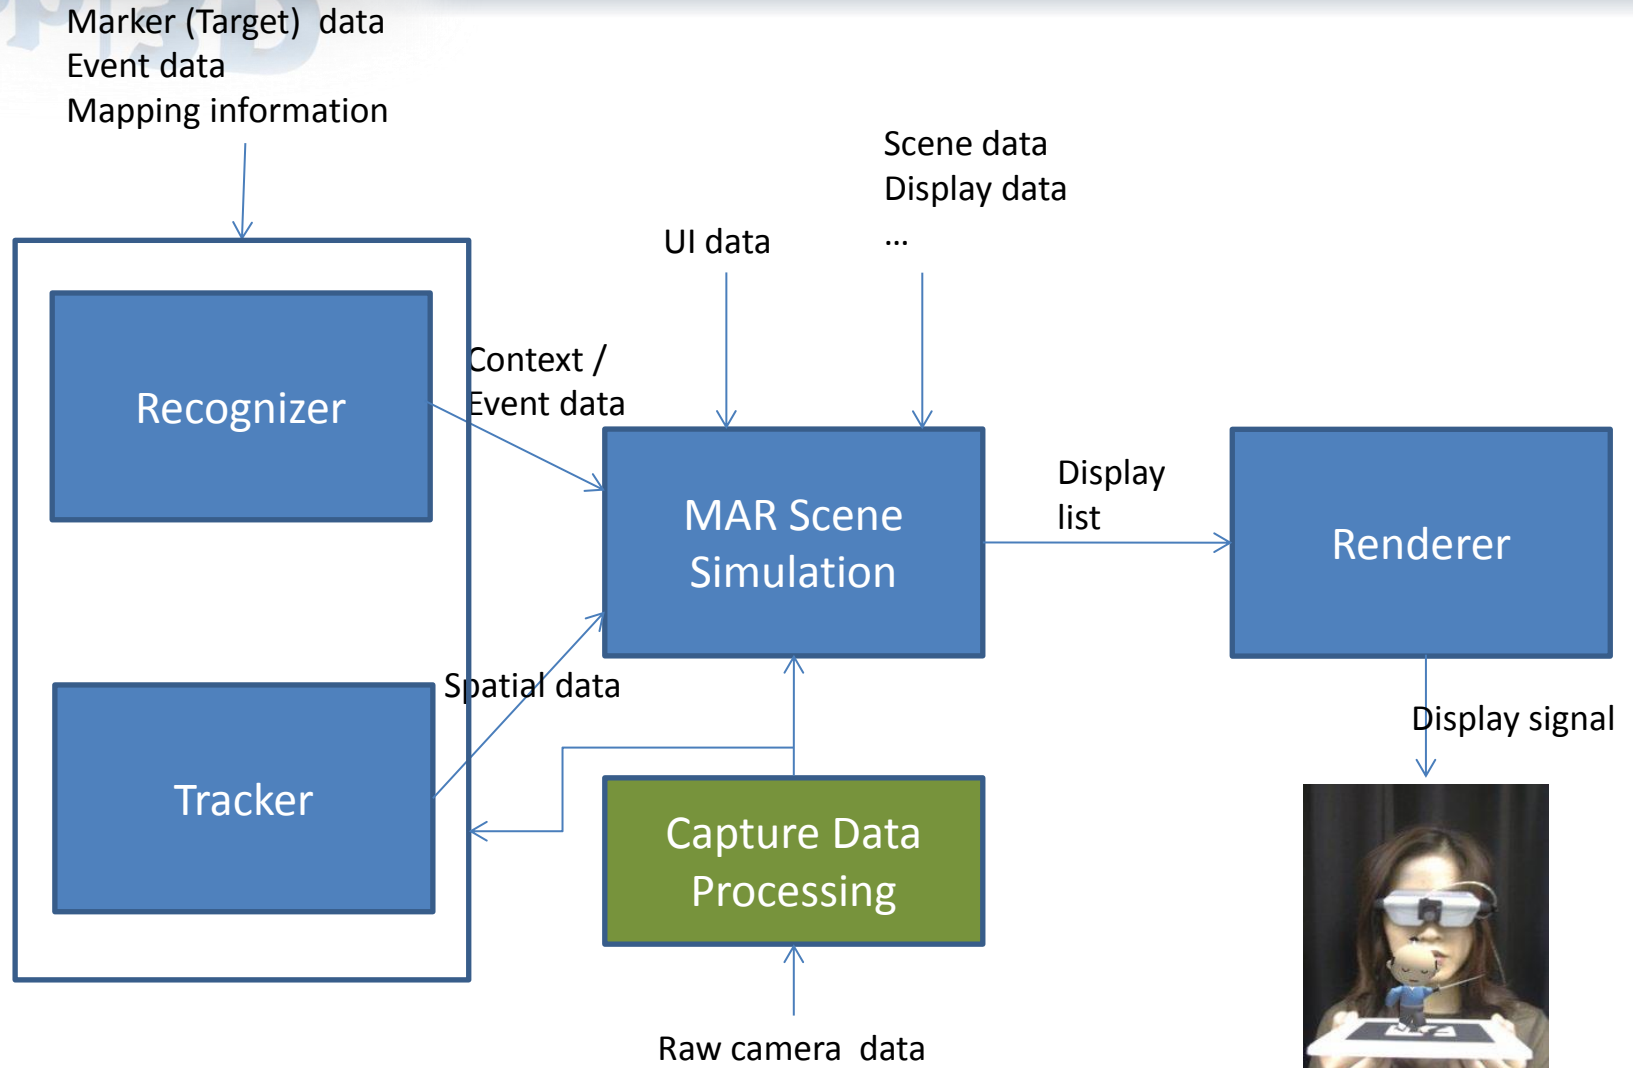

Sensor data

Cloud

Client

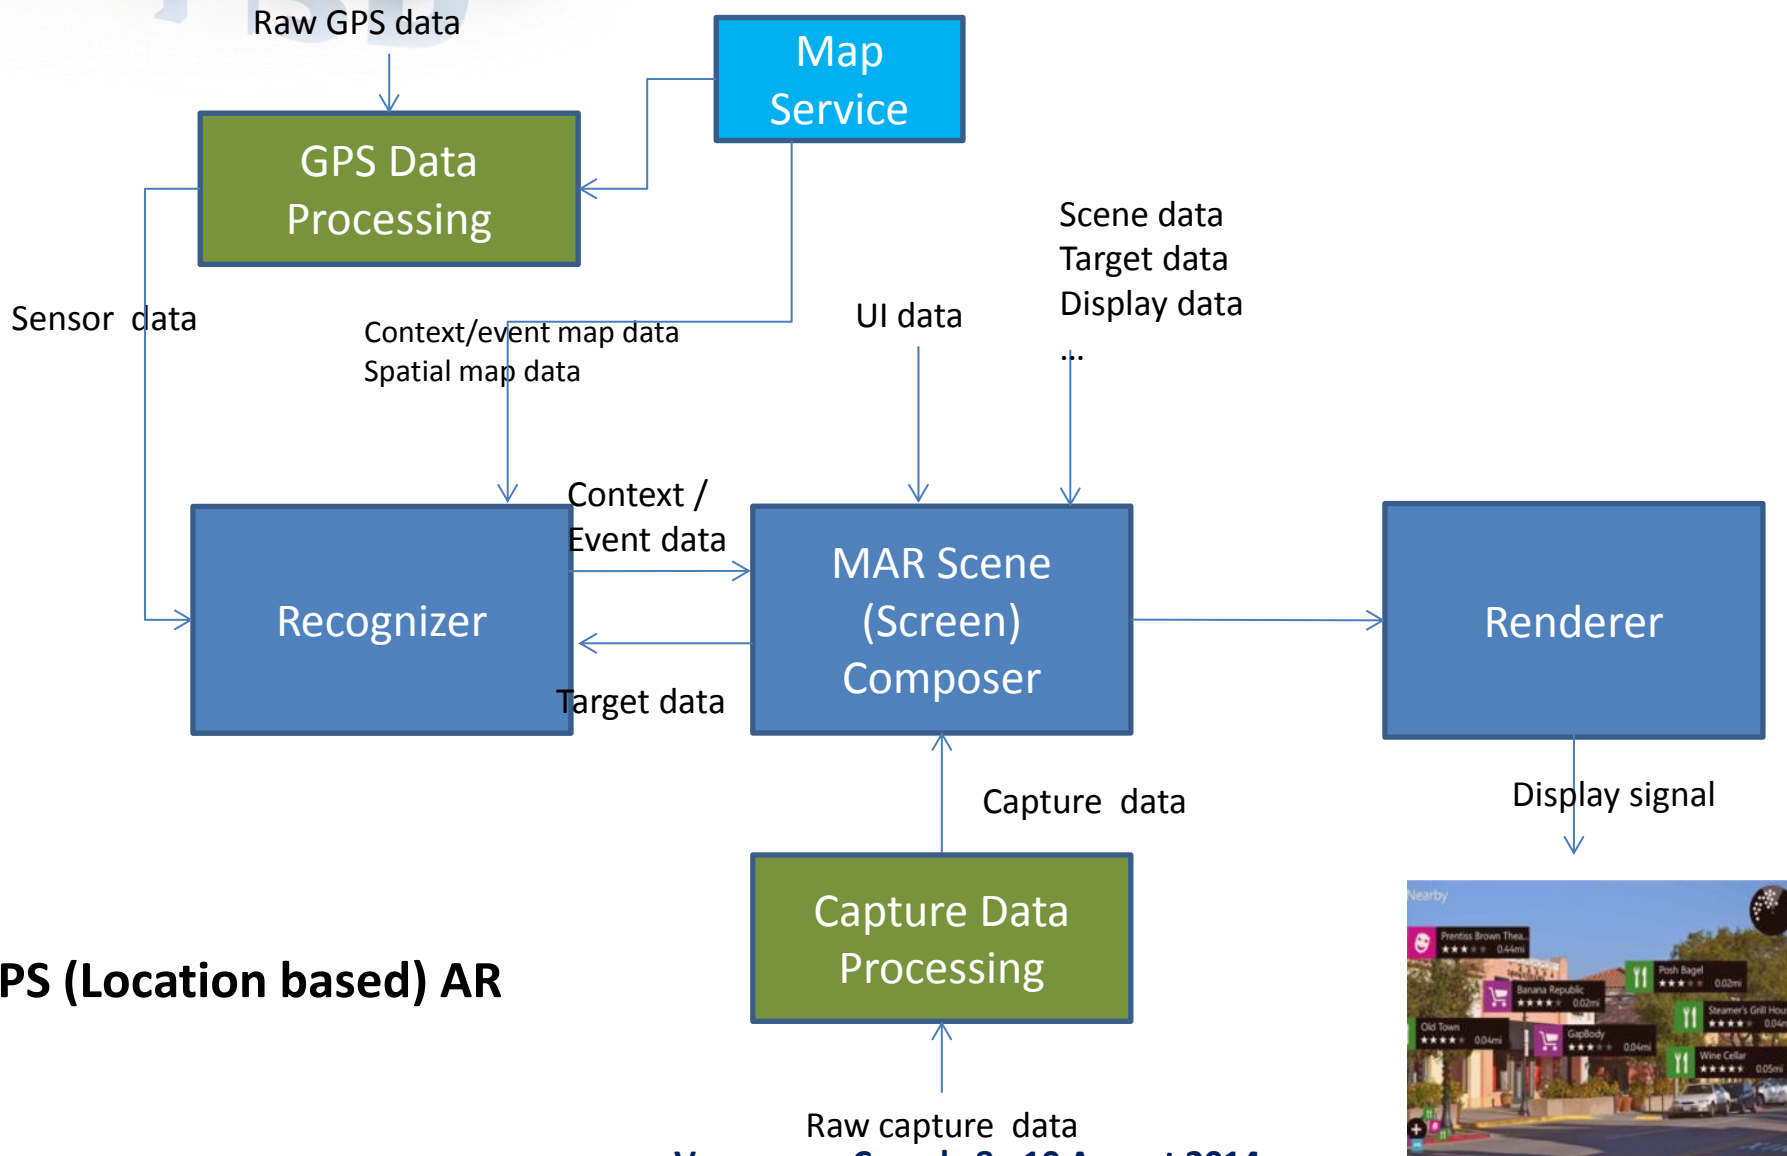

### Marker based Video See Through (c.f. AR Toolkit)

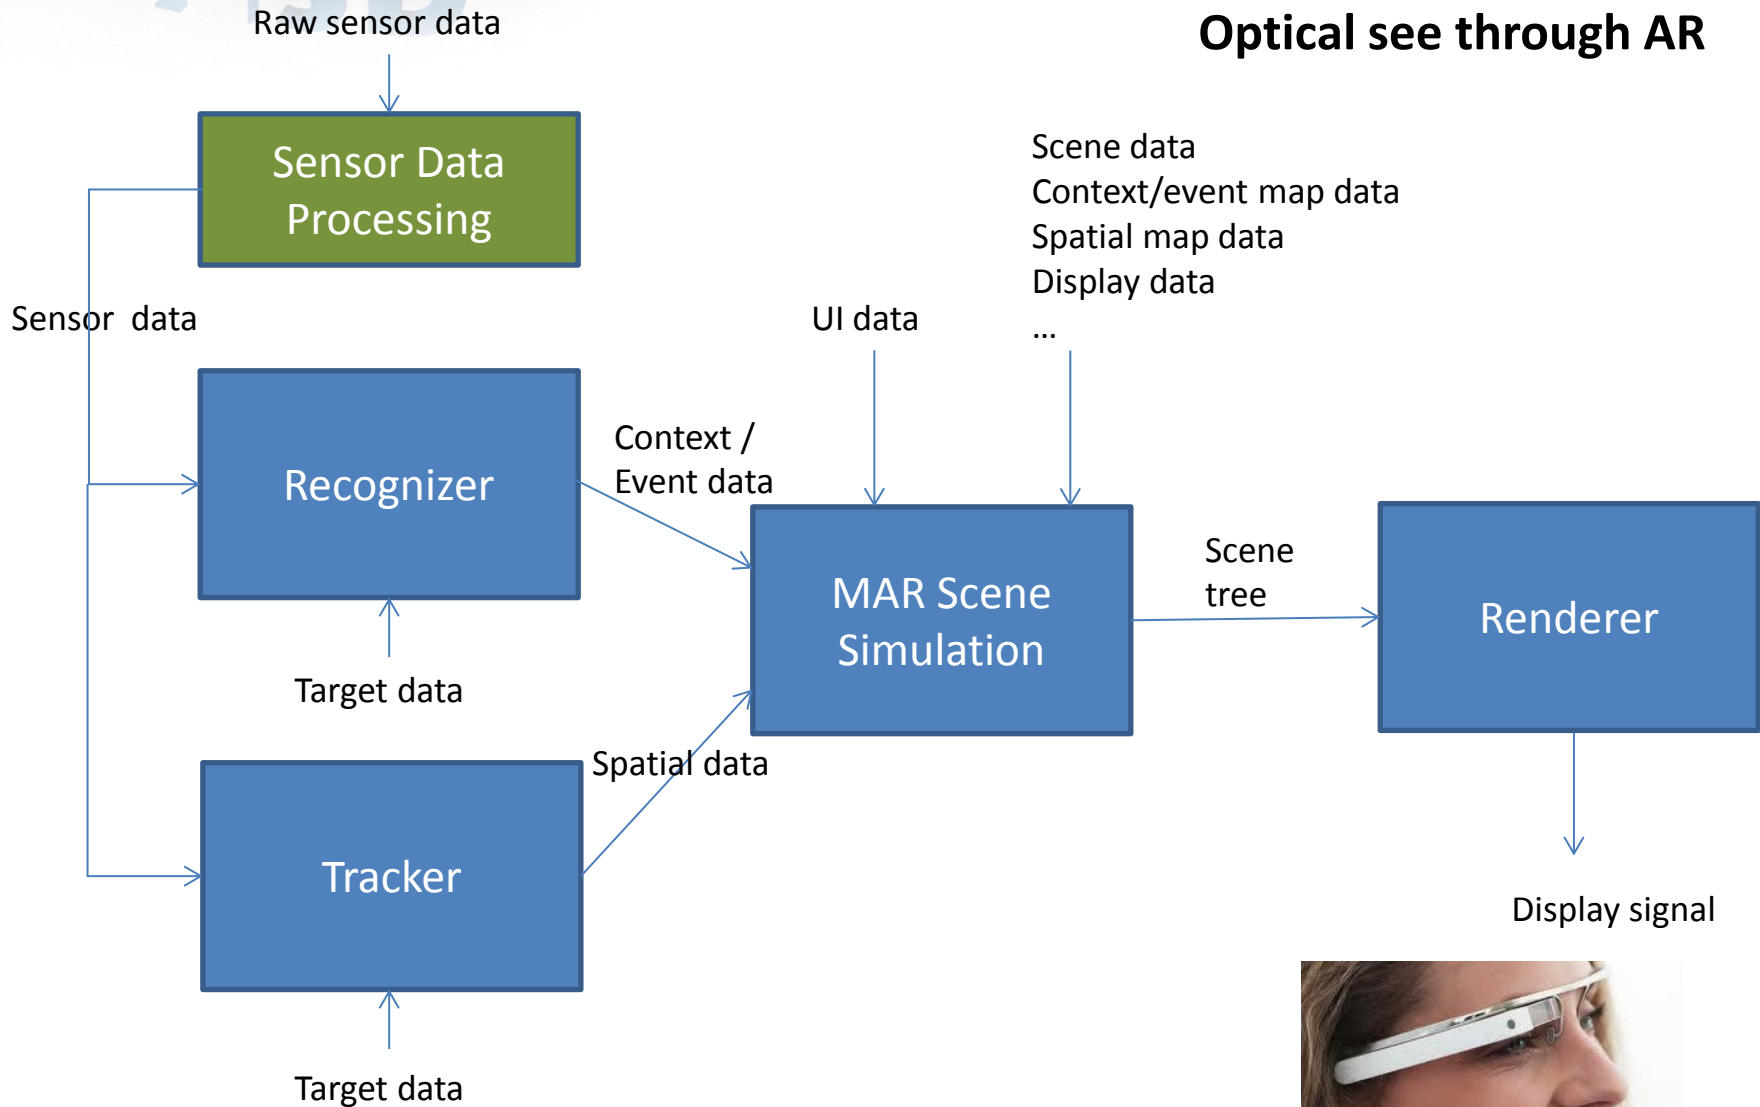

Vancouver, Canada 8 - 10 August 2014

### GPS (Location based) AR

## Optical see through AR

# Get involved in MAR Reference Model

1. Stakeholders and participants
  - MAR Reference Model is intended to become an ISO standard
  - Animated by SC24/WG9 and SC29/WG11
  - Contributions from Web3D, ARS, OGC
  - Open to all interested in developing an open and free standard
2. ISO Intellectual property rights policy
  - MAR Reference model will be published by ISO under the royalty free policy
3. How to get involved
  - Participate to meetings of any standard organization involved (ISO, Web3D, OGC)
  - Direct contributions on <http://wg11.sc29.org/trac/augmentedreality>
4. Contact information
  - Marius Preda ([marius.preda@it-sudparis.eu](mailto:marius.preda@it-sudparis.eu))
  - Gerry Kim ([gjkim@korea.ac.kr](mailto:gjkim@korea.ac.kr))

# Web3D Consortium

- Members from Korea, Germany, France actively working:
  - Rationalized X3D node proposal to support the MAR Reference Model
  - Ongoing design discussions on mailing list, phone calls, wiki:
    - [http://www.web3d.org/wiki/index.php/X3D\\_and\\_Augmented\\_Reality](http://www.web3d.org/wiki/index.php/X3D_and_Augmented_Reality)
    - [http://www.web3d.org/wiki/index.php?title=AR\\_Proposal\\_Public\\_Review](http://www.web3d.org/wiki/index.php?title=AR_Proposal_Public_Review)

# What is Extensible 3D (X3D)?

**X3D is a royalty-free open-standard file format**

- Communicate animated 3D scenes using XML
- Run-time architecture for consistent user interaction
- ISO-ratified standard for storage, retrieval and playback of real-time graphics content
- Enables real-time communication of 3D data across applications: archival publishing format for Web
- Rich set of componentized features for engineering and scientific visualization, CAD and architecture, medical visualization, training and simulation, multimedia, entertainment, education, and more

## X3D AR

- **X3D version 3.4 and 4.0 will support the MAR Reference model (4.0 = HTML5/DOM/X3DOM)**
  - Much work is complete already
- **X3D AR working group cochairs:**
  - [ar\\_chairs@web3d.org](mailto:ar_chairs@web3d.org)
  - Gun Lee, University of New Zealand
  - Timo Engelke, Fraunhofer
- **X3D working group cochair:**
  - Don Brutzman, Naval Postgraduate School
  - [brutzman@nps.edu](mailto:brutzman@nps.edu) cell +1.831.402.4809

# **Appendix: Usage cases**

## Local vs Remote

Modeling of 6 state of the art AR use cases:

1. Real-time, local detection, no registration
2. Real-time, local detection, local registration
3. Real-time, remote detection, no registration
4. Real-time, remote detection, remote registration
5. Real-time, remote detection, local registration
6. Real-time, remote detection, registration and augmentation, local presentation

# MAR Reference Model

## Points of Interests

Modeling of 2 AR use cases using Point of Interests:

1. Content embedded POIs
2. Server available POIs

# MAR Reference Model

## 2D vs 3D video

Modeling of 4 AR use cases using 3D video:

1. Real-time, local depth estimation, condition based augmentation
2. Real-time, local depth estimation, model based augmentation
3. Real-time, remote depth estimation, condition based augmentation
4. Real-time, remote depth estimation, model based augmentation

# MAR Reference Model

## Stereo vs 3D audio

Modeling of 2 AR use cases using 3D audio:

1. Real-time, spatial audio based in intensity
2. Real-time, 3D audio based HRTF (Head-related Transfer Function)

# MAR Reference Model
